

Project Workflow: Week 6

Phase: Inventory System Implementation

1. Objective

The primary objective of Week 6 was to implement the inventory system of the Escape Room Puzzle Game. This phase focused on allowing the player to collect items, manage the collected items, and use the required items to solve puzzles.

2. Detailed Task Breakdown

- **Item Design:**

Defined the different items required in the game and their roles in puzzle solving.

- **Item Collection:**

Implemented the mechanism that allows the player to collect available items from the game rooms.

- **Inventory Management:**

Developed the inventory system to store and manage the items collected by the player.

- **Item Display:**

Implemented a basic system to display the items currently available in the player's inventory.

- **Item Usage:**

Implemented the mechanism for using collected items when they are required to solve a puzzle.

- **Inventory Testing:**

Tested item collection, storage, display, and usage to ensure that the inventory system works correctly.

3. Deliverables

- **Implemented item collection system.**
- **Implemented inventory management system.**
- **Added item display functionality.**
- **Implemented item usage mechanism.**
- **Integrated required items with puzzle solving.**
- **Tested inventory-related functions.**

4. Tools & Resources

Development Environment:

- **Java JDK 11+**
- **IntelliJ IDEA / VS Code**

Resources:

- **Java Documentation**
- **Object-Oriented Programming Concepts**
- **Java Collection Framework**
- **Game Design Resources**
