

Project Workflow: Week 4

Phase: Room Design and Navigation Implementation

1. Objective

The primary objective of Week 4 was to design the game rooms and implement the basic navigation system. This phase focused on creating different game locations, enabling movement between rooms, and providing room descriptions and basic interactions.

2. Detailed Task Breakdown

- **Room Design:**

Designed the structure and layout of the different rooms included in the game.

- **Room Creation:**

Implemented individual room components with unique names, descriptions, and available exits.

- **Navigation System:**

Implemented the mechanism that allows the player to move from one room to another through available exits.

- **Room Description:**

Added descriptive information for each room so that the player can understand the current environment.

- **Basic Room Interaction:**

Implemented basic interactions between the player and objects or elements available within each room.

3. Deliverables

- Designed room structure.
- Implemented different game rooms.
- Basic room navigation system.
- Room descriptions.
- Basic room interaction functionality.

4. Tools & Resources

Development Environment:

- Java JDK 11+
- IntelliJ IDEA / VS Code

Resources:

- Java Documentation
- Java Swing Documentation
- Game room design references
